

OBS! This configuration was tested from Virtual Server on **10.87.0.52** (MSSQL 2005) as source and destination **10.87.0.2** (MSSQL 2000)

go

```
exec sp_addlinkedserver
@server = N'10.87.0.2',
@srvproduct=N'SQL Server' ;
```

```
/* EXEC sp_addlinkedsrvlogin 'Accounts', 'false', 'Domain\Mary', 'MaryP',
'd89q3w4u'*/
```

go

```
EXEC sp_addlinkedsrvlogin
@useself = 'FALSE',
@rmtsrvname = N'10.87.0.2',
@rmtuser = 'sa',
@rmtpassword = 'password'
```

Go

use [CPM]

All of the examples below are tested

```
SELECT * from [10.87.0.2].[CPM].[dbo].[Ingred_Group]
```

```
insert into [10.87.0.2].[CPM].[dbo].[Table1] values ('aaa111','bbbbccc')
```

```
insert into [10.87.0.2].[CPM].[dbo].[Ingred_Group] select * from
[Ingred_Group]
```

Another EXAMPLE which is not tested by be, but it works:

```
use [cpmf]
```

```
go
```

```
exec sp_addlinkedserver
```

```
@server = N'10.57.69.133',
```

```
    @srvproduct=N'SQL Server' ;
```

```
/* EXEC sp_addlinkedsrvlogin 'Accounts', 'false', 'Domain\Mary', 'MaryP',  
'd89q3w4u'
```

```
*/
```

```
go
```

```
EXEC sp_addlinkedsrvlogin
```

```
    @useself = 'FALSE',
```

```
@rmtsrvname = N'10.57.69.133',
```

```
@rmtuser = 'sa',          -- add here your login on Azure DB
```

```
@rmtpassword = " -- add here your password on Azure DB
```

```
go
```

```
use [CPMF]
```

```
GO
```

```
/***** Object: Table [dbo].[aa]      Script Date: 07/29/2014 13:49:49
```

```
*****/
```

```
IF EXISTS (SELECT * FROM sys.objects WHERE object_id =
```

```
OBJECT_ID(N'[dbo].[CPAGEMET]') AND type in (N'U'))
```

```
DROP TABLE [dbo].[CPAGEMET]
```

```
GO
```

```
SELECT * into [CPAGEMET] from
```

```
[10.57.69.133].[compnd].[dbo].[CPAGEMET]
```

```
return
```
